

Who is AbsurdePhoton ?

Topics: [AbsurdePhoton](#) [English](#) [Information](#) [Photographer](#) [Website](#)

■ *AbsurdePhoton* a suitable pseudonym for photography

Photography means **working with light**.

Light is composed of **tiny particles** --- but also **electromagnetic waves** for other physicists --- in fact **nobody knows what exactly light is in the end**.

So, light is composed of **photons**, which are **at the same time** particles AND waves, **material AND immaterial**.

Credo quia absurdum

- apocryphal citation usually credited to **Tertullian**.

Or : « **I believe [it] because it is absurd** ». Which is supposed to be admitted is out of reach of human reason, and in these conditions faith is the *only possible resort*.

Faith... not religious, not in my case. Rather, **faith in what I'm doing**, because I'm an autodidact in many subjects, including photography.

You need an **enormous amount of imagination** to depict these **absurd** particles that compose light, **those absurd photons**, the same that **enable me to shoot photos**, that I have to **learn to control** as much as possible.

■ Other centres of interest

There are **many**:

- if you understood well, **science** is my cup of tea: what matter is made of, how

the universe functions, which brings to watch the stars late at night and **sometimes take pictures** of them

- high-level **computing**, an early passion, useful in my professional life. It's interesting to know about it, especially when you want to set up an internet site
- **women and their beauty**, the second part of *Photogénique*. The aim is to **celebrate female beauty**, and denounce all the **cretinism** following the trail (because I'm also grumpy)
- **drawing**, I have a very "cartoony" style, but am **unable to draw correctly a human being**. This inability and my knowledge in computing combined gave me the **desire to try photography**: I barely know about the "silver" period, and only tried the **digital** way when it became better
- **art** in general : literature, paintings, etc. This adds to the rest, helping me build my own **photographic vision** and **perception of beauty**. If you listen too much to the imbued "artists", they give you lots of other (bad) reasons...
- lastly, there are **many other centres of interest**, but they wouldn't match the aim of this site... and I'm very picky about private life on the internet!
