■ General characteristics of the site

The site **PHOTONGÉNIQUE** by **AbsurdePhoton** was entirely written trying to respect HTML and CSS norms :

- great *flexibility* in appearance
- *responsive* display : the window content is dynamically adapted to its size - try to reduce your window size !
- uses the [Spip](#) Content Management System (CMS)
- almost all the pages of the site can be **shared on social networks**, including **the photos** which are treated differently if possible
- the **articles** can be **formatted** :
 - with the « **printer** » icon for **simplified printing** without the site layout
 - using the « **PDF** » icon allows to convert the articles in **PDF format** : you

can **save an interesting article**, in order to **read it later** or **print it in a much better layout**, or **send it via email** to your friends

■ Site Compatibility

- minimum *resolution* : smartphone-friendly
- *fonts* : webfonts are supported by recent browsers, allowing to heavily customise the site. With browsers that don't support them, fallback fonts will be used
- tested with all widespread *web browsers* - including **mobile phones**, which display the site in an adaptive layout

■ RSS feeds

Follow the last news of the site with the RSS feeds !

You can **subscribe** to these **RSS feeds** to follow the site news :

- [Last articles](#)
- [Last news](#)

■ External ressources used

- on the site, **I mostly try to use my own photos**, but I don't have ones for all the situations. I am a **Libre defender**, so I use **free of rights photos**, under [copyleft](#) or [Creative Commons licence](#) or **equivalent**, identified with the symbol  Copyleft
- it is not always possible to determine the **rights of use** for images found on the web, eventually used on this site. If a content upon which you have property is **badly used** by **PHOTONGÉNIQUE**, send me a message via the [contact form](#) to discuss the issue
- **animated flags** icons : got from 3DFlags.com, but this site is now unavailable
- [Spip plugins](#) used by **PHOTONGÉNIQUE** : all my thanks go to the authors ! They are developed by the « community », people contributing on their own pre-

scious time. **I am an open source defender !**

- **PHP** scripts :
 - the **photo galleries** are automatically generated by a heavily modified script by me, inspired by [bolGallery](#)
 - some **image manipulation functions** come from the excellent [pel](#)
- fonts :
 - [Kimberly Geswein](#) produces cool fonts. I chose [Sue Ellen Francisco](#) for quotes
 - the [Cadson Demak](#) studio provided the menus font : [Mitr](#)
 - [Vernon Adams](#) made the [Mulj](#) font that I use for titles
 - [Open Sans](#) was made by [Steve Matteson](#). With this font, reading on-screen articles is easy
 - the bit messy font used for the slide titles is called [CabinSketch](#), by [Pablo Impallari](#)
